If I Could Invent Something New

Invention is a dream and imagination come true.I have a dream and i keep imagining it could conetrue for the betterment of mankind in general.If i could invent something new, i would invent a car that runs on water as its fuel.I would namethis car It will be trullllly remarkable.considering the following;

Firstly,it is apperant that cars play an important role in our everday lives like,GOING TO WORK ,GOING TO GROECRIESU,TRAVELLING. We depend on cars for transportation.Moreover,the increased use of cars has resulted in air pollution. Futhermore,Ibelivvec that "water cars" woul be a great economic relieveonthe society.

Secondly,If i had a chancet o invent something new which would be very benefiial for mankinf

Admittedly,statistics shows that trfffc jams are increaasing in big cities as well as small cities,especially during business and official hours .

The combination of ordninary and water cars would be a migietation to traffic jams.
