

If I Could Invent Something New

My name is Anamel Ishaku Royal, a J. S. S. 1 student of Top-Class International College. To invent means to create, form, make, develop, manipulate and make functionality of something made by someone. It also means to create something new. If I could invent something new, I would invent a device in future which can help people for their needs and help in cooking called “Eco cooker”.

Eco cooker is a versatile, convertible energy cooker that works with various energy sources (electricity, gas and solar) and switch between cooking modes (stove top, oven, slow cooker, grill). It is a household cooking appliance designed and manufactured to change automatically from use of gas to natural element. It is a multi-purposed appliance with a three-layered apartment which has battery capacity. Eco cooker can be installed in any location around the world. It uses advanced technology and artificial intelligence mechanism to operate.

Eco cooker has the feature of energy conversion, smart cooking technology, compactible, portable and sustainable design. This invention help reduce the cooking time for most foods, it faster, saves energy, safe to use and easy cleaning. Eco cooker uses high heat when cooking but not for a long time. This implies that the nutrients of the food would be retained and make it taste better. This invention can reduce-smoke collaboration in the atmosphere and lessen the intake of harmful molecules that can cause damage to sensitive organs in the body.

Eco cooker would be impactful to the society, individuals and the world at large. It also protect our environment and the ecosystem, thereby reducing carbon emissions and personal exposure to harmful pollutants reducing the burden of disease associated

with household air pollution. It would create a lot of impact on individuals all over the world by reducing the risk of having respiratory diseases such as Bronchitis, Asthma and Pneumonia thereby reducing health challenges and loss of lives. These features will not only make it a ware for cooking but also changing lives by giving space for more pure oxygen to flow freely.

Finally, this invention is a high-quality kitchen equipment that would be beneficial for people in the food industry to help improve food quality and consistency as well as reduce the stress and enjoy cooking. This would result to consistent and high-quality dishes, enhancing customer satisfaction and building brand reputation. Eco cooker has the potential of transforming lives of thousands of people all over the world and create a cleaner and safer state of cooking for a life time
