CLASS: JSS3B

TOPIC: IF I COULD INVENT SOMETHING

If I could invent something new now I would like to invent a car that can drive on roads and also fly on the air for a long time without any fuel.

I want the car to be able to drive from a very long distance, a car that can take me from South Africa to Europe or to many other different countries.

The car would have lots of spaces in it so you can stretch your legs as far as you want and feel comfortable even when driving. To save yourself some stress, you will be able to make your car drive automatically on its own. There would be plenty of place to store your belongings, unlike the cars we are using now that has very little storage with the car looking stuffy or congested.

A car that can take you to a long distance within minutes, with no time wastage like traffic or conflicts on the road. With a lot of privacy and a fast cooling air conditioner (AC) and a door that opens with the use of a remote.

Now you don't have to line up in a queue for fuel or you can now use hydropower. This is the use of water energy in a car. You do not have to worry about fuel scarcity especially in Nigeria.

This is going to reduce at least a probability of 60% of traffic on the road. This can also reduce dumping of your refuse or trash on the road because there will be a trash bin provided in the vehicle that will be sealed tight unless when opened and will be odorless to avoid discomfort in the vehicle. You might think of a thousand reasons why this can be dangerous but also think about a million reasons how this can be of help to mankind or humans to live a better and stress free life.

This is a car that isn't costly nor dangerous to the society and can also lead to reduction of road accident that happens constantly, mainly on highways.

You can be able to design it on your own before the car gets to you, this would reduce tension during traffic on the road.

You'll have a safe, comfortable and fast ride. The car would not be liable to breakdown on the road, but in case of a malfunction or breakdown of the vehicle, the car would be taken care of by our company in a special place by educated mechanics.

Thank you for listening to my essay of what I could invent, if I had the opportunity to do it I won't think twice.

Now you can enjoy yourself in the car with a chilling, cooling "AC" because this is the future.
