

IF I COULD INVENT SOMETHING NEW

WHAT IS INVENTION? invention is a process of creating, constructing, making ideas on new things which has never existed before or producing something new.

If I had the chance to invent something new which would be beneficial for man kind. It would be a flying car. In the past people travelled only on horse or on foot. After car was invented, it changed everything radically, people started using cars more than any other vehicle. Nowadays cars are the most common means of transportation. The number of traffic jam has increased with the use of a great number of cars. Basically, that's why I would like to invent a flying car.

Firstly, invention would help to decrease a driver's stress caused by traffic jams. As a static shows, traffic jam are increasing in big cities as well as small ones. Especially during business hours where everyone is in a hurry trying to get to their place work and unexpectedly encounter massive traffic jam. Some people would prefer to go on flying cars instead of ordinary car [road transportation].

Secondly, the result of these invent there would be decrease in car accident. Some people don't realize that they violate the laws and break the traffic rules and regulation trying to overcome different traffic jam.

Problems like road construction, narrow streets, crowds of people, etc. In my own opinion there is only one solution to that which is flying car, and it would be full of fun obviously people would enjoy riding on it and would love to try it themselves.

I have been having this imagination since I was an infant where I play with car trying to see them fly on air which I know would be possible in years to come.

I would like to change this stressful atmosphere where people waste time in traffic jam instead of that they can spend more time with their family and friends, I know we have air plane which fly on air that makes transportation easier and faster but in my own case I would like to be among the world inventors which I would be included in the list of world inventors 2024 in conclusion flying cars would be very beneficial for people so as to avoid stress and enjoy travelling.

Secondly I would like to invent a machine, I would create a device that can instantly and accurately translate any spoken language in real time which would greatly facilitate communication between people from different linguistic background which can be taken to anywhere and help bridge language barriers across the world. Which will promote understanding, co-operation, and unity among cultures and society. The concept machine with artificial intelligence is not ideal.
