ESSAY TOPIC: IF I COULD INVENT SOMETHING.

Invention is the process of creating something which has not been in existence. The beginning of an invention begins always dreaming about it and personally, I have many dreams (dreaming which means having vision of something). If I could invent something new, it would be something that would make an impact in our society; I would invent a car which uses directly water as it's fuel (let's call it "**water car**"), instead of fossil fuel such as gasoline or natural gas.

I explain below some argument to defend this stance.

First of all, cars play an important role in our everyday life. Cars have become the essential piece of our day-to-day conveyance. Going to work, doing groceries or just transporting goods from one place to another and also, they are used as goods for trading. In the place where I live, public transportation is a bad choice to travel, therefore the use of automobile as a personal way to transport are very used. I dare to say we depend on this kind of transportation, we depend on it's privacy and it's comfort.

Secondly, in addition, cars play an important role in everyday life. The increase use of cars have resulted in the increase of air pollution, consequently results in the increase of depletion of ozone layer, increases the lost of health due to the exhaust fumes from diesel engine which endanger the air. The importance of bringing this water car into existence is to reduce the air pollution in our society for those living in it.

Furthermore, there are many disadvantage of using fossil fuel in a car. Firstly, it leads to air pollution (in which is defined as the release of material substance into the air which is detrimental to both plant, animal and human health) which lead to global warming, respiratory and heart problem, toxic chemical in which makes or force wild life species e.g. lions to loss their habitat and moves to new places. Acidic rain, depletion of ozone layer, which is said to be responsible for protecting human life from Ultra Violet Rays [UVR], is now depleted to the presence of chlorofluro; hydrogen chlorofluro back to the rain and causes skin and eye related problems.

Lastly, beyond the important of cars in our everyday life and also the fact that increase use of fossil fuel have resulted in the increase of air pollution, I strongly believe that water cars would be an important innovation difficult to resist, this is due to the fact that water is deeply cheaper than fossil fuel. In a beginning, water car may be more expensive but it will be an important inventment for our life. Just imagine how cheap it will be to travel from one place to another using this kind of transportation.

In conclusion, I strongly believe this invention will be a turning point in our way of transporting; this will bring with itself a lot of benefits for our society such as the reduction of cost of goods in market.
