**ESSAY ON: IF I WOULD INVENT SOMETHING NEW**

The beginning of an invention begins simply by dreaming about it. Things are invented for the sole purpose of making life easy and better for people. A lot of people have invented a lot of things which have been beneficial to man. People in the likes of Alexander Graham Bell who invented the telephone, Thomas Edison who invented light bulbs, Guglielmo Gutenbery who invented printing press and many more. Inventing all these was quite an herculean task. Imagine how the world would have been if any of the things invented had not seen the light of the day. However, if I could invent something new, it would be something that would make an impact in the society. I would invent a car that uses water and it would be made in such a way that everything in it would work with water. I would name that remarkable invention the water car.

Firstly, it is apparent that cars play an important role in our everyday lives. Going to work, doing shopping and traveling from one place to the other are few examples of how we use this efficient method of transportation. Where I live, public transportation is inconvenient, hence private cars are widely used. We depend on cars, their comfort and their privacy so as to get to our destinations.

However, the increased use of car have resulted in air pollution. Consequently, there has been an increase of respiratory diseases as well as damage to natural environment. Experts continue to make attempt to reduce the impact of Carbon emissions, and I believe the water car is a viable solution.

Furthermore, the cars that have brought comfort to man have also been seen as liabilities that bring sorrow upon man. A lot of lives have been claimed as a result of the use of cars. During car accident, sometimes, cars somersaults. In some occasions the car explodes and this is as a result of the tank rupture. Also, the engine can be damaged causing oil and fuel leakages, which can ignite and cause loss of lives.

Also, the overheating of a car can cause serious damage to the engine and other components and such damage could be radiator, engine, hose damage and water pulp failure. When all these or any of these are done to the car, the owner must fix the car and this would require a lot of money. To avoid all these unnecessary stress and wasting of money; water car should be the people's choice of car.

Additionally, I strongly believe that water car would be a revolutionary innovation because water is significantly cheaper than fuel. Initially, water cars may be more expensive to manufacture, yet in the long run, they will save cost.

Conclusively, I strongly believe that such an invention would be a turning point for people in the transportation system and the society.
