

NAME: CHIOMA DEBORAH NMERIBE

SCHOOL: LORDMERCY MILLENNIUM ACADEMY AKESAN, LAGOS

CLASS: JSS 2

TOPIC: IF I COULD INVENT SOMETHING NEW

If I could invent something new I will create a machine that turns solar energy into straight electric energy. I will call my machine, Instant Automatic Solar Converter: This machine will have the power to convert energy from the sun into electricity in a very short time.

In my community, power supply is never enough. NEPA don't always give us light. Darkness is everywhere. Most nights people sleep in darkness, and heat will not allow somebody to sleep well. This makes people, especially children sick and unhealthy so that they cannot go to school regularly.

Also, peoples incom suffer because they do not have light to work their businesses. Not only that, kids like me cannot watch our favourite programmes because as soon as you put on the TV, NEPA takes light. Buying fuel for generator is expensive and our parents do not always have enough money to buy fuel.

I imagine that my Instant Automatic Solar Converter will be a box that is medium in size. It will have a lot of buttons and lights with a powerful engine that will change energy from the sun into electric energy instantly. It will be wireless and connected to a remote control that is programmed to draw power from it and share to various places in the house or office where it will be used. This machine will be special because you will not be re-charging it like others.

Since we have a lot of Sunshine, this machine will not be short of power because it will have a power store that can store energy when rain falls.

I know that inventing new things is not easy, but I believe that if my Instant Automatic Solar Converter is made, it will help solve so many problems not only in my Community but also in the whole country and many other places where regular light is a problem.

People will not have to spend too much money in buying fuel for generators or pay NEPA bills which they don't even use. Hospitals will work better and people will not die anymore because of power failure during operation. Peoples income will improve as their businesses will work better. Parents will be able to save more money to pay children's school fees and take care of other things. Industries will save a lot of money from buying fuel. This will help improve the quality of their products which will now improve the life of our people.

We have been taught that it was when electricity was invented that many people started creating new things in those developed countries like America and Europe. So, I believe that if my machine is made, kids like myself will have the chance to get better education that will help us create even more new things. Life would become better, and happier for more people.
