

IF I COULD INVENT SOMETHING NEW

To invent simply means to bring into existence what has not been in existence through the act of creativity. inventing something new calls to creativity. The knowledge of inventing, producing and designing a certain device, object or item that will be useful to human life is said to be creativity. according to my own view or insight, for you to invent something new you need to first research, focus, be determined and apply creative ideas.

if I could invent something new, I would like to invent a hydro-electric dish washer. you know in most countries for instance, in Nigeria, most homes, restaurants and fast foods use a dish washer, Due to inadequate power supply, they are not able to make use of it. but hydro-electric dish washer will make it easy and convenient for them or humans to wash used dishes and quicken the process of serving food. this device will make use of water instead of electricity. this devices making use of water will benefit human in both domestic and business sectors. it will facilitate the use of dish washers without electricity and will deprive children or humans entirely the stress of washing plates manually.

These devices work when you add enough water which needs approximately 25 liters of water, when you add the water you then press the super activate button which is red in color.

This device has an automatic speaker internally which can communicate with you on how to use the device carefully. give you signal when the devices are running out of water or is about to breakdown, when you add more than 25 liters of water to it. this device due to its advancement is able to wash 100 used dishes in space of 32mins, these devices has a blue button which helps to make it easy for you to dry the dishes that have been washed. these devices have a solar power panel in case of lack of water in the house, you can bring it out to the reach of sunlight, which will get it fully charged and fit to use for about ten minutes.

with this technology, the world will be fully advanced and proper use of water as a resource that will never finish will be adequate. this technology will advance knowledge of the use water in production of equipment that rely on water for its functionary. this technology will reduce the effects of inadequate power supply convenient, comfortable, and developed for a proper living. this devices making dish washing easy, it also reduces the washing of dishes manually and may lead to the inauguration of an underdeveloped country to a developed country.

In conclusion, for this technology to be a thing of the present, problem solving ability, dependence to natural sources and focus is required to bring into existence this marvelous technology which can civilize a country and transform under developed countries and hereby transforming the world into a new age.
