

NAME: ADEBAYO ILERIOLUWA

SCHOOL: THE AMBASSADORS COLLEGE, OTA, OGUN STATE

CLASS: GRADE 7

IF I COULD INVENT SOMETHING NEW

In our world today, we face so many real-life problems which impede our growth as individuals and collectively as human beings. If I could invent something new, I would invent a Teleporting Machine. This machine, would present us the ability to instantaneously move humans, objects and animals from one location to another without necessarily crossing the physical space between them. There are many potentials that would be birthed by this invention if I indeed have the ability to put up a masterpiece like that. Some of these benefits include the potential breakthrough in Healthcare; Transportation, Tourism and Travels; and its environmental impacts.

If I could invent a Teleporting Machine, it would be introduced in Healthcare and Medical Sciences. Its introduction will massively change the narratives surrounding many avoidable deaths in Nigeria. Nigeria ranks 157th best health system in the world. Sadly, in this category are other African countries (like Sierra-Leone, Somalia, Chad, South Sudan, and Central African Republic) who suffer poor healthcare system. In these countries, the mortality rate of infants and children under the age of five is on the rise. The invention would serve the purpose of rapidly responding to medical emergencies. Patients would be reached and treated in record time. Thus, they stand a chance to live longer. Even the remote areas of Nigeria and Africa at large tend to enjoy more accessibility as medical services could get to them in record time and thus improve healthcare accessibility.

Teleporting Machine in the field of Transportation, Tourism and Travels would be an invention fun-seekers and tourists are waiting for. Travelers and tourists would save significant time, astoundingly reducing long hours of travels to mere seconds. Traffic congestion, would be a reality we no longer relate to. The potential of traveling to space and back in seconds would be a new normal. Part of our diction will include “tele-interplanetary travels”, “teleporting station”, “teleport Science” among other terms that would accompany this invention. Apart from the aforementioned, this invention would equally benefit the government. Revenue generation channel would open up for the government, and this would in turn directly or indirectly positively affect economic boost.

Environmentally, the ozone layer is diminishing. Harmful ultraviolet(UV) radiation reach the earth because the ozone layer which prevents the harmful UV radiation from the sun is depleting. Humans now face health challenges like cataract, skin cancer among other health concerns. With Teleporting Machine, we reduce reliance on fuel-powered vehicles

and transportation by extension. We, thus, reduce emission of harmful gases which further deplete the ozone layer. Although the damage already done can take decades to correct, we stand a chance of saving planet Earth.

In conclusion, Teleporting machine would positively affect our healthcare, our lifestyle, and the environment we desire to leave for the future. If only I could invent the Teleporting Machine, our lives and the future would be more secured than ever.
