Title: If I were to invent something new

Introducing the "Content Guardian" Helping Multimillion Dollar Companies.

Introduction.

Nowadays, everyone is on the internet, from 6 year olds looking for fun games to play to adults for entertainment and information. But with that comes a major issue, anyone can do anything. Now, everyone's allowed to make content. But I have done my research. There is disgusting content every where. Which introduces ContentGuardian, an AI made to exterminate all bad content from inappropriate to copyright.

Training by Professionals.

As well as being extremely revolutionary, it will be trained by human beings. Yes. This AI will be able to tell from any game or artstyle if what you are doing is unnecessarily gory, inappropriate or offensive in any way. The trained people will have made sure this AI can tell and exterminate gross or gory content.

Different Modes

I am fully aware that sometimes, you don't want to terminate some content, i.e. horror games. So if the content is not deemed horrendous by the AI, it will give you the choice. Now this will be in a mode. There will also be a mode to give people warnings. And if they get three, they get terminated.

Accessibility

This AI will be completely free! Yes, just from its website, ContentGuardian will be free to use. All you will have to do is put it in your code! No need for cash or sign up! And if you want it gone, just remove it. It's that simple!

Copyrighted Material and Farms

As a separate mode, you will be able to remove copyright content as well as the others.This will be useful especially for app developers who don't want to infringe and steal the content of others. By removing copyright content, it will be able to stop potential lawsuits.

Content Categorization

Another one of ContentGuardian's many abilities is the fact that it keeps different content in different categories, allowing for easy ways for the developer to see what seems suspicious and what isn't if ContentGuardian didn't see it.

The "Alarm" feature

It will have a feature where if you don't want it terminated, it alarms you of suspicious content, groups and users. Since it will be scanning everything of your software. This will definitely be the preferred option for smaller websites.

Customization

Like any other AI app, you can customize ContentGuardian in any way, if you want to talk to it about some things you want to be removed entirely you are free to do so using the "chat" option.

Conclusion.

To conclude, my thought of a new invention the ContentGuardian, will remove the entire use of moderators, being capable to do everything your average moderator can't. It will change the way apps are looked at forever.
