

## HEIRS INSURANCE ESSAY COMPETION 2024.

### TOPIC: IF I COULD INVENT SOMETHING NEW

Name: Chidiebere Victor Egwumba

School: Stanley Schools, Ikorodu, Lagos.

Class: J.S.S 2

One of the major problems in Nigeria is insecurity, not food production or shortage or other problems because most other problems like food shortage is as a result of insecurity, when farmers can no longer go to their farms for fear of being kidnapped or killed then this results in food shortage so the major problem is insecurity.

If the problem of insecurity is tackled and solved then there will not be food shortage and many other problems and challenges, we face daily will be taken care of.

What will I invent to solve the problem of insecurity? I will invent two inventions.

One, I will invent a SECURITY CAMERA BULB. This bulb will look like a normal bulb but when switch on it will emit light like a normal bulb but it is recording and videoing from the inside of the bulb, it will be linked to all mobile phones in Nigeria through NCC And our BVN through our banks. When anybody with a mobile or an android phone is about to be in danger the bulb will signal the person's phone to alert the person that danger is around the corner so the person takes precaution. This bulb can be installed at homes, offices and also in all public places and bushes.

The bulb will do this by first scanning the persons face then link it to the person's BVN then search for the person's identity and phone number then message the person's phone. The bulb will have constant internet connection, it will also be linked to GPS so it can suggest other possible route for the person to escape out of danger to safety and in extreme cases, this bulb will alert the nearest police station notifying them that someone is in danger stating the exact location.

My second Invention will be a ROBOT still with the same objective of tackling the challenge of insecurity. This robot will be in midair and if the robot sees any kidnapper, armed robber, gun men or Boko haram, The robot will fight and arrest them and take them to the nearest police station.

The robot will have weapons like gun, bombs and other explosives with which it can fight these criminals.

The robot will be made of a very strong iron that cannot be exploded or destroyed easily and it will be powered by solar.

With these two inventions of mine, the problem of insecurity in Nigeria and many other countries will be resolved so we can live in peace and unity once more with plenty food and other good things of life, we will be assured of good life like Heirs Insurance gives.

Thank you HEIRS INSURANCE for giving me the opportunity to think and proffer solution to one of the biggest challenges facing us as a nation with my inventions.
