

## **IF I COULD INVENT SOMETHING NEW**

Invention is like a spark of imagination that ignites a fire of innovation. It's the art of turning dreams into reality and if I was given the opportunity to invent something new, I would create a drug that cures sickle cell anemia. This is an incurable disease that we have been living with for ages and it would be a miracle to the world as many people have been denied the privilege to live their normal lives and if such a drug were brought into their lives, it would be a life changing opportunity for them.

Having already stated what I would invent if I could invent something new, some of the benefits include; Firstly, it would save millions of lives and the world would be a better place for those living with sickle cell anemia and they would be thankful that such an invention was ever created, not to mention the amount of money allocated to taking care of patients with this disease that would be saved and channeled to what benefits the family than in expending money to a life or lives which the survival is not guaranteed.

Secondly, with such a drug available and I being the inventor, I would be extravagantly rich and life will change for my family and I forever. Imagine the millions I can make daily by creating such a miracle drug. As a young aspiring inventor, I would certainly channel a good portion of my gains to charity and the less privileged to improve their well-being. In addition to this, I would establish a Non-Governmental Organization(NGO) solely to distribute these drugs to those living with sickle cell anemia for free, where possible and at a subsidized rate, where not.

Thirdly, invention is synonymous to creating something new which would, by default, result to fame and being famous would bring the inventor to limelight which can result to lots of collaborations, both globally and locally. Today, most countries are connected and the world is now a global village, thus, an invention in Nigeria will find its way to other countries within a short period of time and Nigeria would earn more respect for producing such a miracle drug.

The Guinness Book of Records is a book where legends' names are written for doing what has never been done before and making such a drug would automatically result to me being a legend and a role model to other teenagers out there as age is just a number. Having one's name in the Guinness Book of Records is a rare opportunity that every individual looks forward to attaining yet, only few get lucky to have their names registered there.

In conclusion, if I have the opportunity to invent something new, I would invent a drug to cure sickle cell anemia. Not for the riches nor for the fame, but on the basis to save millions of lives.
