Name: Obitunwase Kelvin M. A.
School: SOS Hermann Gmiener Schools, Gwagwalada, Abuja, FCT.
Class: Basic 8 (JSS2)

IF I COULD INVENT SOMETHING NEW

If I could invent something new, what would it be? I think it should be something to save the world or make business studies relevant in the world. But there are several things doing that already. I would rather invent an AI device that can speak, translate and interpret the animal language into human language. One may ask again, why animals? Animals are an essential part in human life. The meat we eat, and other essential products that sharpen man's health come from animal. Animals also beautify the earth, not only living in depth forest, deserts and savannah areas but human make zoo for them to leave in, making it a tourist site all over the world.

It would be very good to make a device about animal, and its name will be ''ANINFO'. The AI device will reduce the complexity of animal psychology because human no longer need to study much on animal behavior.' This is a good idea to make animal researchers have quality information about animals, animal products and their evolution. The ANINFO will make it easy to attend to animal needs, challenges and wants. Animal scientist, Zoologist, veterinary doctors and other personnel will easily know the treatment to give animals.

I would update information about it as the animal world progresses. ANINFO would be very useful for animal researchers, graduate, undergraduate and university trainees. For many years, it has always been a challenge to understand the challenge and right treatment or drug to give animals. The device will be able to snap and give information about the animal in a particular state or time. I will also be able to read their feelings and emotions and predict the situation that lead to such feeling. Since human rely on animals for vital resources, guard and security, source of labour and companionship, wouldn't ANINFO be a very reliable source to communicate and understand animals? If studying the taxonomy of animal is very hard, wouldn't ANINFO be needed? So ''ANINFO'' could be used in different ways.

ANINFO will create wide range opportunities for medical and science students. This means, it will be very useful in solving issues of unemployment and underemployment across the globe. It will also raise interest in the study of animal sciences and medicine. Vocational training platform will find the device useful in providing skills to artisans and other professionals who seek additional skills. Whenever children are on holiday or weekend and going home bored after school, they could easily go to mild veterinary doctors who would teach them the fundamentals of ANINFO. This will make them decide a happy future.

In conclusion, ANINFO will save the world from unseen animal crisis that has led to reduction in some animal species in the past. Human-animal interaction will be an interesting phenomenon with ANINFO. I can imagine the excitement of the human races seeing ANINFO. I will keep working towards making the world a better place for both human and animals.
