### **IF I COULD INVENT SOMETHING NEW**

There is a saying that everything that is real was once imagined. Inventions actually begin from ordinary imaginations that later come to fruition. To invent means to create something that has never been created before and has benefits. Now, if I could invent something new, it would be a transforming transportation machine that has the capacity to travel through by air, land or water at a very high speed.

This multipurpose machine could serve an emergency response machinery. This machine would be very useful to the society and to Nigeria as a country. In fact, could serve as a multipurpose machine capable of doing so many things. It could be used by fire fighters, Red Cross, Road Safety and other emergency response organisation. When there is an emergency, it could travel by air, and if the air space is congested, it can quickly convert to land, and if there is traffic congestion on the road, it turns to a very high speed boat.

Furthermore, because of the amount of room or space in this machine, it could be used by the armed forces. For instance, if there's a robbery attack and someone alerts the police for immediate response, they don't need to prepare anything that will take long. They will just enter the machine (vehicle) with their weapons and in few seconds they are at the scene. The same thing is applicable to the military, if there is war where they do not need to hesitate, that machine would be so useful to them for an immediate action. That of

the military would be so special because it would be designed to be a bullet proof machinery.

Lastly, this machine could be used by people generally to move from one place to another. They will be very helpful to the society to reduce risks and rates of road accident since it can travel by air too. Another good thing about it is that it does not need petroleum, diesel or gas it is just an electromagnetic device that has the capacity to move in the speed of light.

In conclusion, this transforming transportation machine will help to ease transportation, make traveling more convenient and save lives and properties.
