Draft

Innovation has been the driving force behind the progress of humanity since the dawn of civilization. The desire to create something new, to improve upon existing technologies, and to solve pressing problems has fueled some of the most significant advancements in history. As I ponder the question of what I would invent if given a chance, my imagination runs wild with possibilities. The notion of creating something that could make a positive impact on the world, is both thrilling and daunting.

At this point, if I could invent a device, I will create a device that has the power to instantly communicate with animals.

Imagine being able to understand the language and words of our furry friends, to talk to them and to truly understand their thoughts and desires. This invention would revolutionize the way we interact with the animal kingdom, bridging the gap between humans and animals in such a way that has never been possible before. By creating a such exquisite device, humans will have the desire certainly to take in most animals that they mostly assume are dangerous as pets. For instance, people mostly kill wild and domestic animals all because they find them dangerous due to their appearance or may be the way they react.

Furthermore, we as humans and also Africans should understand that animals are also predominately one of the creatures that add up and make a nation, and that without them in our forest areas and societies a nation is incomplete. So, having the thought in mind in wiping away this animals are maybe just for most humans selfish desire to earn income or just because some find animals dangerous and feel they are not relevant to the society or to a nation. But this invention revolutionizes the way we think bad about this animals, and it could also assist us to know their problems and how we could solve them.

This invention would grow many societies and environment to be more safer and secured around animals for the reason that they can actually understand how most animals usually feel and what they desire in certain times. A device as wonderful as this, should not be often used but should

be used at a specific time, when interacting with animals we are mostly familiar or unfamiliar with.

, most humans finds it difficult to interact with animals, but the new Technical Animal Response Innovation will help them build a courage to interact with animals, mostly the wild and scary ones.

Nevertheless invention of Technological operating system has been a great help around the world.. but with the idea to invent a devices that can be used to talk to animals can help the societies around a nation to be a better and safe place for humans and animals.
