

Name : Isaiah Oreoluwa.

School :Princeton college.

Class : JSS2

Topic :If I could invent something new.

Inventions are the driving forces of development in the world,as they have had thousands of contributions to social,economic,religious and personal lives of individuals.Inventions are not possible without inspiration and innovation,one of most aspiring emotions or feelings in humans.In our various societies today we find humans wanting as the need for technology is at a wide range for example we have Nigeria a country which is seen as underdeveloped and local to both its citizens and aliens,duo to lack of economic stability that affect the whole nation at wide.In this place we call a nation we face a lot of issues including inflation,scarcity of commodities with so much more and as for areas of tourism and fascination we only find commonly noted places like lekki,Lagos Island,Surulere etc being seen as clean,stabilized and standard for living but most of the time it is flooded during rain with sewage,trash and other kinds of stuff due to lack of environmental care and safety.I have noted these factors and I am ready to change all of this if I ever had the chance to invent something new.

If I could invent something new I would look into all problems or situations in the particular zone where I am and sort out all the differences affecting the residents of that area and as matters are pollution is the major issue in Nigeria,unfortunately we all as Nigerians face all types of pollution which include air,land,water,visual,noise,thermal and radioactive,none of these have done any good to any one of us instead they enhance illnesses causing germs.For some people who have chronic diseases such as asthma,ulca or sickle cell anemia have been seriously affected by these issues listed above.

Always being a very observant person I have marked the market as a noisy,dirty and unkempt area which is necessary for us to go to for buying and selling but it also has its own disadvantages and if it all climaxes it could lead to serious consequences on both the traders and customers like temporary or total deafness,lung cancer and aggravated asthma attacks.As for the invention everyone can be of help because we are all affected no matter where we live in or think is good because as abundantly blessed Nigeria is with minerals,natural resources and seldom occasions of natural disasters we still have bad government standards.I would aspire to create a gadget that significantly identifies,prevents and predicts sightings of pollution in every corner of the nation.It would be government certified and approved,its would also consist of items like particulate monitors,electronic temperature meters and atomic

absorption spectrometer fostering care and preventive measures to the whole nation at wide against pollution.

In conclusion,I aspire to turn Nigeria to an eco-friendly nation that has every machine and gadget with the capability of changing every environmental issue that the government has decided to overlook without any form of disturbance,hindrance or obstruction from complying with every programme it is given by which ever owner it may have,all to make Nigeria a better nation.
