

STUDENT NAME: BRIGGS TONTE JNR
SCHOOL NAME: REHAMA ACADEMY
CLASS: J.S.S.2
ESSAY TOPIC: IF I COULD INVENT SOMETHING NEW.

If I could invent something new, it will benefit the entire globe around.

If I am to invent something new it will be different types of robot with specific tasks.

A robot is machine that can do massive task automatically or with guidance. If robots are invented it would change the world for good. Robots will be used to make things easy for man. There will be no suffering in the world. If robots are invented by me I will be well known as the first man to invent an automatic machine in the world.

Firstly there are different types of robot with specific task. Working robots are robots that if I am to invent it will be used to do house chores and for cleaning, cooking robots are robots that if I am to invent it will be used in preparing meals for us if programmed to do so; medical robots acts like humans and treats patients in the clinic or hospitals; writing robots are robots if invented by me it will be used in writing or copying notes, if I am to invent a writing robot it will be mostly used in schools or offices; why I say so is that I actually get tired when I write too much. As a result to the writing robots they are going to be good to invent; instead of we humans writing robots will write for us; fighting robots are robots that if I am to invent it will be flexible for fighting they will be used in mostly wars. Instead of we humans fighting and dying the fighting robots will do the work; sporting robots are robots that if I am to invent it will be used in training athletes like footballers and racers for instance, if the coach of a football team did not make it because I have had one like that who did not show up, so the sporting robots will act like the representative of the coach and train the footballer.

The invention of robots will help explore dangerous places like volcanoes and under the seas. There are good things about robot if they are invented; they have no emotions unlike we humans, unlike humans, robot do not get bored until they are powered off, they can repeatedly do the same thing over and over again without getting any rest, the use of robot increases productivity, they never get distracted unlike we humans .The invention of robot will make individuals who have robots lazy since the robots do all the work for them.

If I am to invent a robot they will have different characteristics of robot; power speed and decision.

Lastly robots invented by me will have external or internal control. The external control means they will be controlled by humans, while the internal control means they will be controlled by themselves.
