IF I WILL INVENT

To Invent is the act of creating or making new things out of imaginary act, that will be beneficial to the people and the world at large. To invent involves a lot of scientific practical and observation.

If I will invent, I will invent things that will help the society, nation and the universe with it's occupants on their daily social activities, I will also be pleased to invent things that will help people on daily basis, which will also improve people standard of living in the world.

Also the invention or creation of new things will also be of positive help to the world, it will also make things look more easier and faster which will also make the world more advanced and educative.

If I will invent, I will create something like devices that will enable the world or technologists in the world ato know the occupant and some mineral resources which can be found in other planets apart from earth and how to locate them. The machines or the devices, which I will invent or create will be able, to state the help of those mineral resources to the world.

The device should also be able to state the benefits in which the people in the world will derive from the mineral resources found in those planets. The device will be very useful and cherished by the world, it will also be used in every educative or learning centers to improve and impact the knowledge of pupils, students and scholars. They will also be taught on how to use it (the device) they should be taught the importance of those mineral resources found and their occupant's in those planets, which will enable the world to look more advanced and educative.

If I will invent, I will also create a machine that will help the world and also the technologist in the world to locate and find hidden treasures with some mineral resources and raw materials which had not been known to the world.

It will also be able to state the importance of those treasures, raw materials found and its location in the world.

I will also make sure that my device will make the world a paradise and a very good dwelling place as well, i will also make sure that my device will bring a lot of benefit to the world at large.

I will also make my device look like an app which will be applied on different communicable ICT gadgets like phone laptop etc which will make the research very easy and fast in the world and outside the world.

The world will be very grateful and thankful to me for making things easier in the world and the world look more advanced, then the result of my devices and machines will enable me to win the Nobel Prize.

I will be thankful to the world
