ESSAY TOPIC: IF I COULD INVENT SOMETHING NEW.

I have always thought about inventing something new. I once tried to make paper wings when I was younger. The aim had always been to fly, but as I grew older, I understood that mankind is evolving every day. New ideas and inventions almost every month. This got me thinking ‘why can’t I be among the great inventors of the world ?’, or am I too little?, definitely not. I too should also be able to make my mark on earth with something beneficial to man. So, I thought of making a machine I called A.C.M which means Automatic Cooking Machine .

The A.C.M, as you might have already guessed ,it is a food cooking machine. If I were to invent this machine , it would look like a pot and a microwave put together, with the pot beneath the microwave. It would be a pot made of fine iron [or titanium]. Beneath the pot is a stand which the pot is placed on. The base of the pot will be able to rotate; this passes for steering the content in the pot when necessary . This stand is also made of iron but laced with thick latex rubber to reduce the heat and electricity conductivity. The cover of the pot is round in shape which of course is joined together with an oven mix around the pot.

Furthermore, it will have a double set wire, one for the pot stand and the other for the oven mix. The oven mix which is inside the A.C.M would have the recipe and procedures for a variety of cooked foods all over the world which can be adjusted or modified to the user’s preference via a keyboard input setting at the top of the top of the A.C.M .When connected to electricity, the only thing the user would do is to put the condiments for cooking in the required places and then leave the A.C.M do the rest. The oven mix have chambers were the
