

IF I COULD INVENT SOMETHING NEW

If I could invent something new it would be a cleaning machine. it will be so fun to have a tool that will change the world forever. it might be abused it will still be of help to so many people especially the old people.

It would not also be designed to clean but to care for the owner. It would be called Nickzy 2.0 it would have five hands, and control circuits at the back, it will have wheels to enable it to move and light, eyes, off and on switch. it is built with a very highly efficient battery to be able to use for a long time.it would be able to pick up litter and make the air cleaner. This idea was inspired by global issue we are facing with keeping the earth and having responsibilities for it.

Our generation are currently battling with global warming which is killing animals and species living in extreme conditions such as snow and ice. Our intensive littering has caused our surroundings and seeds to be heavily polluted, littering is gradually and brutally spluttering our sea life. Our sea life's extinction has risen by 20% in the last ten years which suggest not having oceans in the future.

This machine is designed to assist in cleaning and purifying the damages that has been done so we can therefore make a sustainable environment for the next generation to come. It is run by battery and solar power to prevent the use of fossil fuels and harmful chemicals. This new technology can be sold at a low price meaning easy to buy and beneficial for both local and worldwide communities.

It is made with substantial materials to promote its sturdiness, with the help of this appliance we can multiply the growth of trees, plants and greeneries, it reduces the utilization of cars and other means of transportation and increase the use of recycling. Scientists say we have approximately 10-12 years to change our earth, we must make our air and surrounding cleaner.

In conclusion, I would like to change the way the world thinks, we would all benefit if the earth is treated well, instead of destroying the world with trash, we can spend more time recycling. We can balance the wellbeing of the earth, the authenticity of developing a strong, social and economic environment, Nickzy 2.0 can make the earth a better place, it easily interacts with its surroundings and balance our ecosystem, it can save our beautiful earth and give the world another chance. Nickzy 2.0 the path to a better future.
