

IF I COULD INVENT SOMETHING NEW

Invention is the act of discovering about things that does not exist before. It is also the ability to bring out new and interesting ideas.

Many things never exist before but with the help of people's ideas, it came into existence. The great inventors like Johannes Gutenberg who invented printing press about AD1450, Evangelista Torricelli who invented barometer in the year 1643, Isaac Newton discovered reflecting telescope in the year 1668, Christian Huggins invented pendulum clock in 1658, Otto Von Guericke invented air pump in 1650, and Con Edison invented the fluorescent tube in the year 1934, though he had to try 21 times before he succeeded.

Going further, there is a saying that weak mind discuss people, average minds, discuss events while great minds discuss ideas.

An idea came to my mind and I asked myself what can I invent?

I wish to invent teleporting machine, how to invent a teleporting is built a capacitor with a large enough hole in the center to fit anything, dispatch across space of time, quantum information between two entangled particle reduce all of the matter in the target between two entangled particles to subatomic particles, convert the particles to energy (waves) and transmit those waves to a receiver, convert the waves back to their original positions.

Then, the uses of teleporting machine are: it provides connectivity, it can be used for transportation revolution, it can be used for emergency services, it can use for environmental benefits, and finally it can also be use for education and research.

The advantages of teleporting machine are that, Instant transportation, global accessibility, increased safety, enhance collaboration and reduce traffic congestion.

The disadvantage of teleporting machine is that it causes technical difficulties. The importances of teleporting machine are: economic growth, it saves time; it enhances education and improves health care.

In conclusion, invention is very important because it improves quality in life, it helps in solving problems, it increases productivity, it improves healthcare and finally, it inspires future generations to bring out new ideas.
