

## If I could Invent Something New

Problems we face in our everyday life have always inspired man to create inventions. My invention will be something that will make an impact both in the society and environment. If I had the chance to invent something new, it would be the AI Sneakers.

The AI sneakers would be powered by electricity. It has a shoe pad made up of a soft cushion which comforts the feet. It either comes in Velcro or lace. My sneakers will have a speaker by the side which plays audio while connected to your phone. It also comes with a free ear pod and flash drive which educate you more on the AI sneaker. It operates by connecting it to your phone via bluetooth, you simply open the AI sneakers app and activate, and then you can choose any destination of your choice. In less than one minute, the shoe automatically starts walking.

The AI Sneakers have so many benefits. One of the benefits is that it will help to relieve stress. People usually get tired from walking long distances. That is why we need the AI sneakers. Instead of walking, the AI sneakers will take care of that.

Furthermore, people with leg challenges would be greatly helped. Some individuals might have grown up with leg disabilities. With the AI sneakers, they can walk without a problem.

In conclusion, my sneakers would be very beneficial and important to humans, the society and environment.
