## **IF I COULD INVENT SOMETHING NEW**

Over 70% of the world's population is currently suffering from food scarcity also known as a famine. Food scarcity or famine is a global issue whereby people of a society, community, or country do not have enough food to eat.

I would invent "The food multiplier": The food multiplier is a device that turns a small amount of food into a huge portion. I want to make the food multiplier available to all citizens of all countries so everyone gets a chance at fulfillment and nutrition.

Food scarcity is one of the main reasons death takes people's lives and the cause of diseases like:

Cholera

Kwashiorkor

Beri Beri

Night Blindness etc.

All of these are dangerous and deadly diseases which are known to destroy and damage people's lives almost permanently. With the food multiplier all of these things could be solved in whole. The first 3 S.D.G goals could be achieved with just this small project.

The 3 S.D.G include;

No poverty

Zero Hunger

Good Health and Well being

So many children and adults die just due to malnutrition. Which is where the food multiplier comes in. The food multiplier has the capability to multiply food in a matter of seconds. The food multiplier is easy and efficient to use. It can successfully complete S.D.G 2, which is Zero hunger. So many people could be helped in the process of making a device.

If you don't believe me take a look at some of the advantages of the food multiplier

1. Nutrition
2. Long life
3. The whole world at large being in harmony
4. Ending of wars
5. Income
6. Job opportunities

7. Good Health

8. It can be a source of replenishment if food ever runs out during a famine

I would like to make the food multiplier available in all countries every country would have at least 120 Food multipliers.

The food multiplier works in these simple steps:

Step 1: Point the food multiplier to the food

Step 2: Plug the food multiplier

Step 3: Push the button on the side of the food multiplier

Step 4: Blast the small portion of food

With these 4 small steps the whole world at large could change.

The food multiplier can also multiply water to avoid droughts and other natural disasters involving our land and its inhabitants.

Everyone should have a chance at peace, nutrition, wellbeing, no poverty, and sense of value so many things could come good just from this simple machine. Let me show you the picture I am trying to paint; Imagine a world no child is on the street, and a beautiful farm full of rich plants and a worker getting their salary for the hard work they have done and children playing and afterwards eating and fill their bellies all these things could be our own nation and every other nation in the world could have this. This is our world and our decision.

THANK YOU
