Class: JSS 2

IF I COULD EVENT SOMETHING NEW

Over 72% of the earth has a system of trading with air transport system and sometimes planes crash due to mechanic problems, people die from that. If I could invent something new that will be an airplane which when it has engine problems, then it can bring out a new engine for flying.

People can rely on this airplane than the normal airplane we use because this new airplane has special features like a new engine system of flying, and people cannot be scared because of the new feature. There is a 98% of it working because we all know that accidents are unexpected events, but people can be sure of relying on this one better and the best part is that cheaper than other airplanes.

Another feature coming with is that when the second engine system fails, it can repair itself, so this will make flying for pilots easier because they don't have to worry about their airplane crashing, people can trust this because 98.6% trust worthy and it's cheap and it also flies faster to your destination, if you were supposed to travel to Canada in 10 hours, the Speedo Airlines will take you on a 5 hours to the same location. It comes in jets, helicopters, airplanes, etc. People can buy the jet at a very low price than the normal private jets you buy.

Advantages of the Speedo Airlines is that is quicker than other planes, due to it's speed, it also has a way of it turning into a yacht and you go from where you are to your destination. It's bigger and huge. If 500 people could enter the normal plane, more than 10,000 people can enter the new plane. It has more quality and is in more quantity and it's also cheaper meaning you can buy it up to like 250,000.

Disadvantages of this is that it's too loud, during plane rides, it usually makes more noise in the plane so if you are coming for a plane ride, I suggest on your way, get headphones, if you don't have them, you can buy some on your way to the airport, to prevent your eardrums from ringing and ear pain.

I can invent such work, but I need people like Administrative Assistant, Aeronautical Engineer, Aerospace Engineer, Civil Engineer, Electrical Engineers, Inspector, Secretary, Mechanical Engineer, Operations Supervisor, Manufacturing Engineer, Public Relations, Test pilot, Technicians, Sheet Metal Fabricator, etc.

I know that this can come to life because if I put my whole interest in this, it can be achieved. There is a part of the bible which says "I can do all things through Christ that strengthens me", through this bible passage that the word of God has revealed to us, I know that everything is possible just like building the new airplane and through hard work and focus, I know that I will do it in life. God shall surely help me and will Guide me.
