

## IF I COULD INVENT SOMETHING NEW

If I could invent something new, it will definitely be a machine that will be able to help the police and the armed forces to easily bring justice to the society. I will call it the 'ARMED JX 3000'. The AJX(ARMED JX 3000) will have more than one programming. It will have different programming for different users. The ARMED JX 3000 will be programmed like a GPS(Global Positioning System).

It will be able to pick up signals from different satellites. It will show the emergency agencies of an accident or crime quickly.

It will ease and reduce the stress of investigation because it will pick up videos from the satellite and access all cameras in that area or place and this programming will help the police.

For soldiers, The ARMED JX 3000 comes in different sizes. It will also have a programming that will be able to indicate any heatmap, navigate any movement around the area and scan the area for any intruder or strange person, vehicles or houses.

It will show extra information such as the distance between them(the user and the object). Working like a GPS, it shows the way to the object, distance and monitor the object.

For fire fighters, it will take them to the place of emergency even if the way to the scene of accident or emergency is far. It will show the user shortcuts to his/her destination. In rescue operations, it can get the analyzed map or picture of the building or place. It will even show the source of fire or the part of the building where the victim is.

Like a GPS, directions are shown on the screen and also spoken by a synthesized voice. Taking information from two satellites at a time.

The following are the uses of the ARMED JX 3000; It has special tracking abilities, It has more than one programming which makes it multi-functional, It has a distress button; In case of kidnap, you can just press the distress button and it will send a distress call to the nearest police station then it will track your location.

Then the ARMED JX 3000's twin, The TNM; (TRACKER, NAVIGATOR and MULTI-FUNCTION) Machine. This comes in different sizes. There are;

Minimum sized TNM

Medium sized TNM

Maximum sized TNM

It has the same abilities as the ARMED JX 3000 but a lot more. It has more abilities.

. The following are the uses of the TNM; It can be switched into different modes, It can be used as a CCTV(Close Circuit Television), It can connect to two or more satellites together at the same time, It can reduce crime rate, It can reduce the stress of investigation, It can be fixed or planted anywhere for example: It can be planted in the car, house, It can show drivers the safer and faster way to his/her destination, It can warn drivers if they exceed their speed limit, It comes in handheld which is portable.
