

NAME: NWOKOBIA GIFT NGOZI

SCHOOL: APPOLLIAN COMPREHENSIVE HIGH SCHOOL

CLASS: JSS2

AGE: 11

ADDRESS: 3, Omodisu Street, Off Isawo Road, Agric, Ikorodu, Lagos State

PRINCIPAL: MRS. E.A. IDOWU

PHONE NUMBER: 08055136797

EMAIL: abosedei615@gmail.com

TOPIC: IF I COULD INVENT SOMETHING NEW

If I could invent something new, I would create a teleportation machine. This machine would revolutionize travel and communication by allowing people to instantly move from one place to another. In a world where technology is advancing rapidly, with innovations like smartphones, slim iPads, virtual reality, and electric cars like Teslas, no one talks about traveling without spending money. Everyone is developing machines, but few consider the possibility of instant travel.

This teleportation machine would enable people to communicate through apps like WhatsApp and Telegram, but with the added benefit of being physically present in an instant. Imagine celebrating holidays like Christmas and Easter with your entire family, no matter where they are. With teleportation, running errands would be effortless, and travel expenses would become a thing of the past. You could visit dream destinations, archaeological sites, and remarkable places, and see your loved ones in the blink of an eye.

Not only would this machine be fast and efficient, but it would also be affordable for everyone around the globe, allowing people to experience life to its fullest. It would cater to all ages and sizes, and offer opportunities to explore high-class restaurants, five-star hotels, beaches, and resorts. You could even teleport to the future to see what the world will be like and predict new trends in cooking, home renovation, and makeup. Additionally, it could take you back in time to learn from the past and not repeat the same mistakes.

Teleportation would open up job opportunities abroad and allow people to experience different cultures, including food, dress, music, and beliefs, without spending a dime. If

you missed a flight or got lost, you could simply teleport to your destination. No more walking long distances; teleportation would handle that.

This invention would significantly change our lives, making tasks faster and reducing our reliance on vehicles and gasoline. It would allow others to experience our culture as well. Safety and security would be top priorities in my design, ensuring everyone could use the teleportation machine without worry. It would also provide unlimited supplies from different countries, even if local stocks were sold out. Teleportation would be faster, cheaper, and reduce environmental pollution from aircraft and vehicles, as well as the risk of accidents and loss of lives.

In conclusion, if given a chance, this teleportation machine would transform humanity forever.
