

NAME: ANYANWU AUSTIN CHINEDU

SCHOOL: SACRED HEART MODEL COLLEGE.

CLASS: JSS3.

TITTLE: IF ICOULD INVENT SOMETHING NEW

### PREAMBLE

It is often said that “Necessity is the mother of invention” so, invention as the strength of man is the advancement of ideas into reality. It is now an outdated information that the world is rapidly changing into a tech based society full of endless possibilities. In this essay, the concept of invention is going to be analyzed for further explanation.

Invention, since human existence has been a very inseparable typical part of human history, making both the early civilizations to rely on indigenous solutions to overcome tedious challenges; paving way for future breakthrough in rudimental aspect of human existence such as Science, Transportation, Medicine and Agriculture.

Now, coming to my invention, I have dreamt of making a car that uses solar based energy as its powering source as opposed to fossil fuel including gasoline/ petroleum. The benefit of this invention to the society is further elaborated in my explanations below:

The growing increase in the use of cars has resulted in air pollution causing climate change, global warming amongst other environmental consequences. Furthermore there has been a significant increase in natural disasters such as floods, droughts, natural wildfires amidst many others. To this end, experts have raised concerns alongside solutions to help curb this inevitable impact of nature. I believe that my invented solar car is an effective solution.

The solar powered cars invented also contain interesting features different from other solar powered cars. It is not only going to be solar energy based which could be cheaper and efficient for people, but also going to be automated, equipped with high-tech gadgets. In addition these cars have features like Stuffy, an artificial intelligence companion, that would assist the driver in his schedule and also promote” Green Safety” ethics, contributing to the restoration of the society wellbeing.

This renewable invention would help decrease the use of non- renewable resources thereby controlling the contaminated waste produced of these resources. It will also help ease the issue of car break down, with the A.I assistance. The system can detect any damage or low productivity. However persuading the user to try using other alternatives to ease the stress of being stranded on the road. This can also enable long term savings on transportation and also enhance more time for family togetherness.

This innovation has low maintenance cost, they do not necessary require a lot of fund for its maintenance. This can boost the family, community, social and national economy. It can also be a great option for travelling drivers using short distances in sunny weather. It will also be cost effective. My invention will be of great advantage to the society, as it would culturally, economically, socially and environmentally make an impact in the society positively. Therefore invention without mincing words is the advancement of ideas into reality when invested.

I believe my dream can be invested into reality because of its benefits to society.
