IF I COULD INVENT SOMETHING NEW

If i were oppotuned to invent something new, it would be a wearable device, which i shall call ADS - watch meaning Anti Disease Watch that would be able to detect covid-19. I though of this after seeing covid-19 ravaged the world and killed uncountable number of people around the world.

By this invention, covid-19 would be easily detected. This wearable device would contain a little thermometer that would regulate the temprature of the body as this is one of the symtoms of covid-19. If this invention is made, it would be very beneficial to all man kind. It would be very convinent to carry about and would also help to prevent the spread of covid-19 to the outside world. So, the earlier the disease process is tackle, the tinier the chance of death or out break.

The ADS - watch technology is not a vaccine but a detector. The engine will work on the principles of related temperature ,that is,the wearers temperature and the temperature of another body closer to the wearer. For instance,if the bearer of the wearable device gets closer to an infected individual, the wearable device would be hotter than normal. To achieve this, it would be invented in such a way that it would sense a temperature rise on the other person or persons just like the infrared thermometer. It may also have the ability to monitor heart beats.

This invention would help alot because the faliure to detact covid-19 and other diseases in time might worsen the health condition and lead to future pandemics. Through this invention, millions of lives would be saved, just as the saying "Prevention is better that cure".

In summary, apart from the need to prevent the further spread of covid-19 and other diseases, early detection is very important to safeguard the individual from long time health discomfort. That's why i would love to invent a wearable device that detects covid-19 and other diseases.

Thanks.   Ezechiemeka Adaeze
