If I had a chance to invest something new this would be very beneficial for mankind it would be a flying car.

A flying car is a type of personal air vehicle that provides door-to-door transportation by both road and air many prototypes have been built since the first years of the twentieth century, but production status has still yet to be reached. It has four wheels and wings.

Due to my research it is said that it uses unleaded gas consuming just 7.85 liters of gasoline per 60 miles flight.

In the past people travelled on a horse, donkey or just on foot.

After car was invented it changed everything radically which made people to start using car more than past forms of transportation. Nowadays cars are the most common means of transportation. The number of traffic jams has increased with the use of great number of cars. Basically, that's why I would like to invent a flying car.

Firstly, my invention would help to decrease driver's stress caused by traffic jams are increasing in big cities such as Lagos, as well as small ones such as Abeokuta. Especially, during business hours in Lagos when everyone is in a hurry trying to get to their workplace and unexpectedly encounter serious traffic jam.

Some people would prefer to drive flying cars instead of ordinary cars. The combination of ordinary and flying cars definitely would help to get rid of traffic jams.

Secondly, in the result of this invention there would be decrease of car accidents. Sometimes people don't realize that they violate the laws and break the traffic rules because of a lot of reason one of which is because they are in a hurry, they are trying to overcome different traffic problems like road constitution, narrow streets, crowds of people etc.

Thirdly, if this invention is made it can help to manage emergency situations faster because the rate at which a flying car would fly would be different from that of an ordinary car in which people's life would be more secured.

Fourthly, this car unlike earlier models, is very practical, therefore it can be stored in a garage, like a normal car. It is hoped that this new model, successfully meets all flight testing and management, scheduled. Obviously this car will call attention worldwide.

And finally, it would be fun. We have often met the concept of flying cars in science fictions or Hollywood films. Obviously, it is interesting and people would want to try it themselves.

In conclusion, I would like to change this stressful atmosphere. Actually people waste time in traffic jams instead of spending more time with their family or friends.
