

## IF I COULD INVENT SOMETHING NEW

I saw invention as means of developing new ideas through creativity, that is; making something that was not in existence to exist in order to solve a particular problem in the society or nation. Having known what I saw invention to be, then something that can proffer solution to the current situation of our society and the nation at large came to my mind.

**Development of a fueless car.** The price of things immediately changed when the fuel subsidy removal was announced by the president of our country. Since then, hardship began to spread all over the nation. On this note, I thought of having device that can still operate without using fuel (petrol or diesel). This idea came to me long time ago before this championship essay came up and I have been looking for a way to express it. I wish I have been given a chance of making my dream a reality, which shall make me to be proud of myself. The car shall have the following features: *tires, wheels, steering, seats, roof, doors, brake, ignition, lighting bulbs, acceleration pedal, boot for luggage, glasses, battery and other accessories.*

This car will be powered by solar energy, which the roof shall basically be made of solar panels that will attract solar energy down to the inverter in order to convert the solar energy into electrical energy that will drive the engine. The car also has a charger that can directly charge it from electricity source, when sun is not enough to charge the battery. This will help the car to be functional all the time regardless the weather.

Having seen the major thing that put our society into hardship to be "price of fuel," I decided to think about inventing this car, considering the way people are suffering in the country.

**Benefits of inventing this car.** If this car could be mass-produced and it becomes useful in all the states, transport fare will automatically drop in order to ease transportation.

Crime will be reduced. The current hardship pushed many into criminal activities for survival. With the invention of this car, the level of crime in our society will reduce because things will be cheaper.

It will reduce prostitution. The current situation of the country made many of our women and ladies to see prostitution as a means of survival. The little business they were doing could no longer put food on their table due to high cost of things and there is no increment of salary. This tempted some of our ladies into prostitution.

It will create more job opportunity. Cars were packed and taxis were also packed due to high price of fuel. Those packed cars and taxis shall be useful again. This will make the jobless drivers to have their job back.

With these benefits, the country shall have a different shape if I am encouraged to invent this car.
