

My name is Abdulsalam Mariam Oluakemi.

Topic: If I could invent something new

I would invent Robots that detects examination malpractice if I were to invent something new in Nigeria. The reason I would like to invent a robot that detects examination malpractice is because nowadays, most schools, tertiary institutions and universities are now involved in different forms of examination malpractice. The research reports indicates that in 2018, out of 1,572,396 candidates that sat for the examination for the WAEC examination 102,058 results were withheld over examination malpractice, while in 2019, out of 1,590,173 candidates 180,205 results were seized, in 2020,215,149 results out of 1,538,445 candidates that sat for the examination were seized.

Frank Anya, a public affairs commentator blamed the cancerous virus to the quality of teaching and parental guidance given to children. Examination malpractice takes root in the poor quality of teaching and paying less attention to the progress of their wards. The major cause of examination malpractice in Nigeria is laziness. What is the origin of examination malpractice in the world? It is traced to 1914 when the senior Cambridge local examination leaked. If I were to invent something new, I would invent a robot that detects malpractice And it will help all schools, universities and tertiary institutions around the world. If I invent it, I would make it cheaper at a very low price so all schools can buy. What is the root cause of examination malpractice? The root cause came from the behavior of examiners, parents and system. Now, there are even forms of examination malpractice which are dubbing, sorting, giraffing, expo, writing on the body, use of sign language and use of cell phone

among others, which is not good and will later in the future destroy their precious lives.

Inventing a robot to detect malpractice will help their precious lives from not destroying and will help the teachers and many more and the parents. As I said earlier, examination malpractice will ruin your dear life, so run from it because it has a sentence and if you are caught you will be sentenced to 3-5 years imprisonment with or without fine. Now imagine with me if you are sentenced to 3-5 years imprisonment. Also, examination malpractice has a grave consequence on the individuals and institutions of learning, communities and the country at large. So the consequences are dismissal, termination, loss of position and lack of self-confidence. So how my robot will invent. My robot will be a tiny small cube with a high sense of detecting malpractice because if the robot is big they will be scared and be shivering so for them not to know, it will be small and magnetic so, it can stick to the bottom of their desk. It will be able to sense talking, moving and all other types of malpractice. After I'm done I will make awareness by myself and few other people with me to the schools and tell the proprietors/proprietress, school administrator, principals and teachers for them to know. My reason will not only help me, it will help other students too. THANK YOU
