Essay Topic:IF I COULD INVENT SOMETHING NEW.

The term invention was gotten from the word *invenio* or *inventio* which means discovering or finding out. invention can best be define as the process or act of bringing ideas or object together in a novel way to create something new. All over the world there have and had been lots of invention from different inventors such as; Otto von Guericke the inventor of vacuum pump, Christan Huygen the inventor of pendulum clock, etc.

The concept "If could invent something new" has to do with the idea of creating something new. Therefore,if I have a choice to invent or create something new which that will be beneficial to mankind,it will be a rechargeable flying car.

Nowadays,, looking at the world of transportation, there are lots of traffic problems which makes me imagine and think of something new to help the transportation system.However, my reasons for choosing a rechargeable flying car are;

Firstly, a rechargeable flying car would reduce the high traffic jam. Moreover, in populated places like Lagos, it is very common for a person to say he/she will come back from somewhere like the market in an hour and would end up spending almost double that time due to traffic. Therefore from my thinking, making or inventing a rechargeable flying car will help to curb this issue and additionally save time.

Secondly, Nowadays It is very rare to see a person use his/her own vehicle, except commercial drivers or maybe those financially stable people simply because of the high increase in the amount of fuel and also fuel Scarcity. However using a rechargeable flying would help this issue of high cost of transportation.

A rechargeable Flying car can be used to locate,or travel long distance in lesser time due to it's ability to fly. A rechargeable flying car can also reduce the cost of stress of boarding an aeroplane, helicopter or any Other aircraft to travel long distance, because a rechargeable flying car does not required the use of passport,visa or any other vital document.

Additionally,using a rechargeable flying car will help reduce the rate of car or motor accident because the rate of car or motor on highways would be quite different from that on air.

In conclusion, if i have the opportunity to invent something new it will be a rechargeable Flying Car and help reduce the traffic in the world.
