CLASS: JSS3
SCHOOL: ABBOT DAYSPRING SCHOOL

IF I COULD INVENT SOMETHING NEW

My dream of inventing something new brings about the question " If I Could Invent Something New".

What is Invention? This is something, typically a process or device. that has been invented.

If I could invent something, it would be agricultural related machine in which the farmers don't need manual engagement in weed control, and poultry management.

Over years, as told by my parents that are from villages in Ekiti State, farming in Nigeria has been so difficult with low output compare to the result been obtained from western world as revealed to us by our Agricultural science teacher of Abbot Dayspring School, Ayobo, Lagos State.

A story of how my paternal grandfather yearly earned his living, provided for the family with nothing to export to improve the value of Naira, and later died in pain due to actively involved in manual Labour was told.

Presently, Nigerians are crying of hunger and starvation due to high cost of food, meanwhile our land is good for agriculture. Many don't have interest in farming because of the reasons mentioned concerning my grandfather!

My interest in farming also is shaking if I can't invent machines for farming, considering high cost of western mechanization.

Going by the exchange rate of Naira to dollar, bringing western technology to help agriculture in Nigeria is huge! My dream of inventing machines that will improve agricultural practices will be cheaper.

Education has informed me, now as Basic 9 student, that we can improve on our local technology, while we transfer better technology to our country through quality education.

With the basic technology and basic science been taught in our school, If I could invent something new, it will be on how to ease the ways farmers manage their farms by designing a machine that will do their job without stress and with large output that will improve their well being and help the country to improve Naira.
