

IF I COULD INVEST SOMETHING NEW

My name is Goodnews Atinu-Awaji Miracle. I am a student of Royal Built child school, located at NO. 13 Aeroplane drive, Fimie market road, port Harcourt Rivers State. I am in grade nine at age twelve years and hail from Okorobo-ile Andoni Local Government Area, Rivers State Nigeria.

In the next seventeen years I will be through with my secondary education, first degree, masters and PHD to enable me have enough knowledge and get enough standard materials for my invention.

As a neurosurgeon, if I could invent something new, that will help my medical career, I will invent a machine that will not only see the brain but also has the ability to understand the wave patterns of the brain and how it retrieves and interpretes information. I will program this machine to perfectly interpret the parts of the brain that their malfunctions relate to degenerative diseases as the brain is a complex organ that scientist do not have a full understanding of how it properly operates.

The machine will be in a shape of an head set. It will stop before the ear. In its middle there will be an on and off button. If you want to know the wave patterns of the patient's brain, you press the detector button behind the off and on button then it will give you the readings from the visual display above the machine. It will then explain how it got the wave patterns by interpreting information being sent to the brain. In cases of degenerative diseases like Alzheimer's disease, parkinson's disease, it will scan the brain and reveal the part of the brain that the malfunction is related to. I will name it XFACTOR it can be used when it is needed by students for practical's or surgeons.

It can be used in universities of hospitals.

It can be used by surgeons or medical students

It can be used on animals, mad people and mentally disabled persons.

The Xfactor can be kept in the operating theater in hospitals and laboratory in universities.

The Xfactor should be kept lying flat on a non metallic surface.

Before using it, one should plug it to the socket. This is because it is rechargeable.

It is mobile.

Advantages of Xfactor are:

It understands how the brain receive and interpretes information.

It saves a lot of stress.

It is mobile.

Disadvantages of Xfactor are:

It is expensive.

It has low water resistance.

Its spare parts are not really available.

Brain diseases are common. With my invention, I will know which site of the brain precisely is causing these defects or illness and properly cure it.

Xfactor:- A special quality especially one that is essential for success and it's difficult to describe.

I would like to do this because, the world had gone beyond what we can imagine today. Everything is possible if only I can put my mind to work. Yes it is possible.
