SCHOOL: FEDERAL SCIENCE AND TECHNICAL COLLEGE, OROZO, ABUJA

CLASS: JUNIOR SECONDARY SCHOOL 3

### **If I Could Invent Something new**

First of all, what is inventing something new? Inventing something new means making something new that has never existed before. So, I would like to invent a device that can know the where about of somebody or something, and what the person or something is doing, at any particular time. It is just like a world monitoring device for humans, animals or objects.

For instance, you have the world monitoring device installed in one of your family members, and he gets kidnapped. You can immediately open it in your phone or computer system, and write the person's name, and then the device will show you where the person is and what the person is doing, so you can contact the police, immediately. Also, if something gets lost, you can easily find it, by using your phone or a computer system to locate the thing.

The world monitoring device is going to have a lot of intelligent signals, that knows everything around the world, and compatible with a google map. It can be put in a safe and secured part of a person and cannot be found, stopped or removed, except by the person that has the permission.

The benefits of such an application will be enormous, as it is going to help in reducing crime drastically, and also reduce the extent people loss their belongings. It can be used in monitoring children, workers and people that are sent on errand, to be sure they are complying with the directives given to them.

However, there may be challenges, at the initial time and also cases of misuse of the device, but modifications and control will help, at long run, to achieve the maximum potentials of it. would be prohibited. It will also have to come with a manual inside the pack that would guide one, on how to use it properly.

In conclusion, this device is going to be a ground breaking device, that can be very helpful to a lot of people, countries, states and places, by saving lives, objects and time required to find missing things.
