

IF I COULD INVENT SOMETHING NEW

Education leader to success

- What is to invent : To produce (something such as a useful device or process) for the first time through the use of the imagination or of ingenious thinking and experiment
- To devices by thinking: FABRICATE
- Archaic: Find, Discover

In this article, I will walk you through the steps of how to start inventing from identifying my problem to seeking funding and partnerships.

Step 1: Identify a problem or need

Step 2: Research Existing Solutions

Step 3: Brain Storm ideas

Step 4: create a prototype

Step 5: Test and Refine

Step 6: File for Patents.

If I COULD INVENT something New: I will invent an ocean cleaning machine

- **What is the name of the machine that cleans the ocean:** In July 2021, a new design called system 002, also known as “Jenny” was deployed in the Great Pacific Garbage Patch for testing. In October the organization announced that the system has gathered 28,000 kilograms (62,001 lb) of trash.
- **What is the ocean cleaning machine called:** System 002 (or Jenny, as we say) clean up was our first full-sealed cleaning up system and proved our ability to truly make an impact in the Great Pacific Garbage Patch (GPCP). System 002 validated our ocean technology.
- **How does the ocean cleaning up machine work:** In simple terms when our system is operating, the retention zone acts like a huge bag, collecting the plastic guided into the bag by the system wing. The bag is full, we take it out of the water, empty the contents on to the deck of our vessels, and put it back to collect another load.
- The new invention saving ours: the ocean up, waste hawk, sponge suit, sea bin marine trash skimmer, moaner board.
- **How to start an essay on ocean pollution:** Begin your essay by outlining the major sources of ocean pollution, which include land-based sources like agricultural run-off, industrial discharges, and coastal activities as well as ocean-based sources like oil spills and marine debris.
- **Start ups innovating oceans technology: 4 ocean :** There will be soon a beach cleaning robot, mechanically sifts sand to remove plastic waste and other debris without harming the environment. The ocean clean-up, system 002, a floating trash collector, uses wind and wave action to guide it to where the most trash will be.
- **What does cleaning the ocean do:** The ocean clean-up is a non-profit organization developing and scaling technologies to rid the ocean of plastic. To achieve this objective, we use a dual strategy: intercepting plastic in rivers to cut the inflow of pollution, and cleaning up what has already accumulated in the ocean & won't go away by itself.
- The ocean clean-up team consists of 120 engineers, researchers, scientists, computational mobile, and supporting roles, working daily to rid the world of plastic.

The ocean clean-up is developing and scaling technologies to remove 90% by 240 with ocean clean-up systems & river 13 004 2022, ocean clean-up says it off set its mission and that it is experts are also worried that.

In conclusion this garget helps in cleaning the ocean form germs and bar
