

## **IF I COULD INVENT SOMETHING NEW.**

Scientists like Thomas Eddison, Bartolomeo Cristofori etc, have invented wonderful things that would enhance one's physical environment, but if I could invent something new I would rather focus on the aspect of health than the physical. An invention that no scientist has ever thought of inventing such a thing. If I could invent something new, I would rather on focus on life than the environment, that is to invent a heart that can supply life and perform all other functions a heart can perform.

What is a heart? According to the encyclopedia Britannica (volume 8), the heart is a hollow muscular organ that supplies life and pumps blood through the circulatory system by rhythmic contraction and dilation. The heart is divided into four compartments, two with thin walls called atria (or Atrium for singular) and two with thick walls called ventricles. Between each is a valve that causes blood to flow to all the parts of the body.

The death rate in the society is quite alarming, as many die like hen. The question is, do doctors just allow their patients to die? Or do they forfeit because they don't know what to do at that point in time? How could they let their patients to die when we can be of help to them by inventing something incredible? Many people die because of heart disease or heart failure and these doctors don't do anything to help them? NO! if there would be an artificial heart that can perform the functions a real human heart, many lives would be saved.

Now that we are in a scientific generation, let us change the world into a conducive environment. In the sense that an old man who has coronary thrombosis (heart attack) still has a chance of living, an individual affected by stroke still has a chance of living, and an individual with heart failure still has a chance of living. If a human heart can pump seventy milliliters (70ml) of blood each time it beat and seven thousand six hundred liters (7,600l) of blood per day, then imagine of an artificial heart able to this and replace a natural heart.

Summarily, if this invention could be created, many individual we have scientist to be thankful for. For every day, individual weep for their loved ones who die but if this heart could be invented there would be less cries. Finally, if this could be invented hundreds, thousands, millions, will be very grateful for such an opportunity an artificial heart.
