IF I COULD INVENT SOMETHING NEW

If I could invent something new, it would be a smart watch that detects diseases, also called a medical wrist watch. Do you know that millions of Nigerians die because of diseases that was not known or rather detected early because of ignorance or poverty?

If I could invent a medical wrist watch that detects diseases, all people need is to just get the medical watch, wear it and the AI (Artificial Intelligence) will tell them everything about their body, the cure, prevention and everything possibly needed for good health that they need to know.

As we all know, the greatest health is wealth and happiness begins with good health. If we can get the medical watch, we can stay in our homes, school, places of work or in any convenient place and check our health status. With this medical smart watch, knowing your diseases, sickness or body checkup will be so much better, easier, faster and cheaper because you do not need to go to the Hospital and pay all kinds of bills as required before knowing your health status.

On a final note, using smart watch to check your health status will be the best thing to do because everyone and anyone, everywhere and anywhere can check their health status without stress. That is why I want to create a medical wrist watch because with this, I believe it will reduce and prevent loss of lives in Nigeria.

The journey of a thousand miles begins with a single step. When we thrive to become better than we are, everything around us experiences change and becomes better too.
