CLASS: JSS 2
AGE: 11YEARS
SCHOOL: ROYAL CLAN ACADEMY OMAGWA
PORT HARCOURT RIVERS STATE

Expository Essay Writing of 500 words
Titled: If I can invent something new

Introduction: There are a lot of students, who are going through Academic Challenges, that's why I came up with invention of a device called quick retentive memory (QRM) to enable studying become fun.

There are some questions we need to answer, before proceeding:

1. Why do students perform poorly academically?
2. Why do students find it difficult to read or study their books?

I could remember my mom will always say in those days students use their kerosene lamp to study for hours, but today you will find it difficult to see students taking hours to read and study their books. Promotion and repetition of class was based on individual performances, students were promoted by merit, but now students are promoted generally.

Some parents even go to the extent of meeting their children's teachers with some gifts to enable their children's results or performance to be outstanding. This is the reason we have a lot of empty students all over the society and school environment in general. This singular act has created a lot of loop hole in the academic lives of many students.

What are some of the reasons students find it difficult to understand or remember what they have been taught or what they read.

1. Peer pressure.
2. Too much responsibility from home.
3. When a student dislike a particular subject which can sometimes be personal or because of the teacher at that particular time.
4. Incomprehensive knowledge of the subject.

Now to solve this problems of students. I have decided to come up with an invention that will enable students absorb and recall what they were taught and what have been studied.

The device is called Quick Retentive Memory (QRM), this device will not only help students, it will also make the teachers to carry out their duties with ease.

How does this device or technology work?

This device can be in form of a helmet or like a wrist watch. Just like the way we install an app into our newly purchased phones and that app becomes part of the phone. That is how this device I will invent will look like. This device will have no limit because you can even access the internet and download any information you need and it will become part of what you know. Just as the teacher is teaching or when you are reading your books. This device have the capacity to accept, store and display these information when they are needed.

Not this device is not to make students lazy, rather it's to enhance their learning capacity and to also perform Excellency in their academics without much stress.

Summary:

A lot of things have gone wrong to the extent that some students cannot defend their certificate at different academic level. The reasons are, students are not given a comprehensive knowledge about a particular subject or some student have poor retentive memories, so this device will aid students to remember work with their brains automatically and effectively well.
