## **IF I COULD INVENT SOMETHING NEW**

As the saying goes “Necessity is the mother of invention”. This implies that there will be no life without invention of new ideas and new technologies to assist humanity in all areas of life. It is on record today that little ideas put together by past inventors have turned out into innovations that make life comfortable. For instance, an experiment conducted by Michael Faraday (Electricity), The Wright brothers (Aircrafts), etcetera have turned out to be the great inventions of all times.

In the light of this, there are so many things I could invent if I had the materials, tools, or equipment. I have conceived inventing: a rocket car, a generator powered by wind energy. Among all these, the one I wish to invent is a wind-powered generator.

The technology involved in building a wind-powered generator is very simple. The major devices needed are a windmill, turbine, a generator, and a transmitting cable to transmit the energy from the turbine to the generator. This will make it easier for use at home and places of work.

The dire need of energy in our nation today could be solved with this my little invention. Today the world is embracing cleaner energy but here in Nigeria our main source of energy is Petroleum which is used for both electricity and transportation. My wind-powered generator is totally a cleaner energy which purely naturally from wind source.

This invention of mine will not only solve the problem of epileptic power supply,

excessive cost of petrol and diesel but will as well generate revenue for the government and help to boost the economy so that small scale industries can use it as a source of electricity for production.

Furthermore, this will profit our nation Nigeria by helping us migrate from a developing country to a developed country. This machine will not only solve the energy crisis in Nigeria but also transform the state of nation from a consumer to a production nation. My wind-powered generator will bring up Nigeria from the mud, dust it off and give it a robe.

An inventor goes down to history as a person who has devoted his time to create something out of nothing. Thus, I want to put a mark on the dust of time as the great inventor of the wind powered generator.

My wind powered energy will be the game changer in the energy sector. It will bring about total transformation of our dear nation to a productive nation to be reckoned with.

In conclusion, I know that with this my great invention the world will be a better place as businesses thrive better amid uninterrupted power supply.
