

## **IF I COULD INVENT SOMETHING NEW.**

The beginning of an invention begins by always dreaming about it and personally i have big dreams. Generally speaking,if i could invent something new,it would be a car which uses water as its fuel(let's call it a water car)instead of us using fossil fuels such as gasoline,natural gas or even diesel.A water car would make an impact in our society. I would like to defend this stance with the arguments below.

First of all,cars play an important role in our everyday life. Cars have become essential piece in the 24th Century. Going to work,getting groceries from the market,going to school or just transporting from one place to another cannot be acquired if we use our legs,rather we use cars because they make life easier and better. Public transportation is good but it has many disadvantages than advantages. So it is required for us to have our own cars to avoid cons.

Secondly,cars play an important role in our everyday life ,the increase of cars have resulted in the increase of air pollution. This consequently results in the increase of respiratory deceases as well as the lost of healthy ecosystems. Air pollution is high throughout the world and i have found a way to reduce it. With the use of water car air pollution will be reduced. The only byproduct is water vapor and heat,making it an attractive option for reducing greenhouse gas emissions and air pollution. Water car also reduces noise pollution because there is no combustion,it reduces vibrations e.t.c.

Lastly,the importance of water car is that water is more cheaper than fossil fuels. I know that water car can be expensive in the beginning but it will be a huge investment in our life. Just imagine coming outside your house and seeing people driving cars without making noise,won't it be great. I strongly believe that this invention will be the beginning of something big in this country. It will bring many benefits for our society. It will encourage tourists to come and see what we NIGERIANS have invented.

A hydrogen fuel cell typically operate at a decibel level of around 20 - 30 DBA (describes A -weighted),which is comparable to a whisper or a quiet conversation. In contrast,traditional vehicles can produce noise levels of 70 - 80 DBA or more. I hope I could convince you that water car would be a good investment in our countries.
