ESSAY TOPIC: IF I COULD INVENT SOMETHING NEW

Newness is what gives meaning to life, newness is what gives us hope about tomorrow and how bright it can be. Newness is what allows us to believe we can become who we want to be and this newness begins from our inside.

It is from this inside I will like to talk about “If I could Invent Something New”.

When I grow up, I would like to invent a robot that can last for a generation and can also secure lives and properties. It will also be indestructible to secure people from bandits and kidnapers. I will name the robots “Anti – bandits. The robots will can be able to act like humans. It can sleep, wake, eat, run, cry etc. It will be all over Nigeria. It will recognize bandits and kidnapers in disguise through artificial intelligence. It will capture where they live.

This robot will put a stop to insecurity in Nigeria. It will be strong, fast, super active, smart and reliable. It can be controlled through any device you want, but you have to download the app called the “Anti-bandit”. I will like to talk about the robot itself.

The “Anti-bandit” will put an end to banditry as said earlier and also make the Northern people to be at peace wherever they go in the North regions. Everyone in the society will be secured by this robot. The robots will be made by the strongest metal in the world and it is also going to be with different weapons. The robot will be made to fly, go underground and can swim in water to stop any means of insecurity. It will be given to every Nigerians for safety purposes everywhere they go in the country.

The Benefits of the Robot

1. It can be used for self defense
2. It can be used to stop insecurity
3. It is going to help Nigeria build a better Nation.
4. The government will focus on other needs of the Nation
5. The Military will not need to go to war again

This could be sold to other countries at the same time serves as another source of revenue for the government.

This robot will help to promote unity and peace among Nations which will be beneficial to everyone.

The robot would be designed in such a way that it can accommodate future challenges and latest versions would be updated as the needs arises.

The technology can also be worked on to fight others internal crime like financial fraudster, bank robbery, drugs addicts, kidnapping, sextual abuse, baby factory, child trade, smuggling etc.

It will attract investors to Nigeria that will help build our research and development in technology and science. Nigeria will be more relevant than we currently are and we will help other Nations to grow but above all impact lives as safety is one of the basic needs of humans.
