An invention begins from a dream and one of my dream is to invent something that could be of societal importance: I would invention a medical diagnosis eye google that can scan and detect diseases in the body, since under medical emergency some tests results takes time

This device would reduce cost incurred on the purchase of reagents used for medical laboratory tests, that is, it saves cost and the money could be channeled into other medical output. Again, the use of medical diagnosis eye google will help to reduce employment of manpower or labour to the barest minimum, thereby helping to cut cost yet rendering a quality life charges. Also, in a situation where there is no medical laboratory, a doctor can still detect any ailment using the eye google and treatment would commence immediately to save life.

Thirdly, the use of the eye google will help to reduce the rate of environmental pollution to the barest minimum unlike laboratory reagent, basically chemicals which when discharge either after use or as a result of expiration, may cause harm to the ecosystem or our environment

The risk of medical laboratory test being mismatch will reduce that is when a person's result is given to another person after laboratory test this has being a major problem especially in large hospitals where medical test are done for large number of people at the same time putting the lives of individuals at risk. There is also a risk of exposure to diseases to the lab scientist if they are not meticulous while handling blood specimens, careless discharge of remnant and other specimen used for laboratory test could lead to outbreak of disease in such locality.

The use of medical diagnosis eye google will be of great value in developing nations like Africa with the dilapidated medical facilities or structures that is very common in Africa society whereby a once well-functioning hospital will be an abandoned either by the government or individuals owners leaving the hospital substandard or outdated medical equipment for the running of the hospital business.

In conclusion, beyond the importance of medical laboratory activities, in our everyday life and also the fact that their involvement in taking care of human health have resulted into environmental pollution, risk of medical laboratory result in mismatch. I strongly

believe that medical diagnosis eye google will be an important innovation difficult to resist this is due to the fact that its procedure is faster than the use of specimen in running a medical laboratory test in the beginning, this innovation may encounter some doubtful thinking from people over authentic and probably reality but I tell you with no doubt that this will be an important investment for humanity.
