Essay Topic: IF I COULD INVENT SOMETHING NEW.

IF I COULD INVENT SOMETHING NEW.

Invention is the act creating something new, like a process or device. If I could invent something new, what would it be? And what would you invent? Well, for me, I would invent a device that makes it easier to swallow pills. But first, what is a pill? A pill is a small round mass of solid medicine to be swallowed whole. Another word for a pill is a tablet. Although, there are already some devices that help people swallow pills, but my invention would be different.

This device would help people who are sick to easily swallow the medicine their doctor prescribed. I would also make sure it doesn't cause any side effects. The main aim of the device is to slip in the pill into the mouth of a person. It would look like this:

A drug will be kept on the blue circle, and then a button will be pressed making the blue circle able to push the drug into the mouth of a person. It is designed for water to pass through the mouth of the person immediately, flushing the drug into the system of the person.

This device would really help young children and adults who find it hard to swallow pills. Some people try to chew the tablets or crush them and mix them with food, but doing this can sometimes stop the medicine from working properly.

In fact, certain pills are formulated to be swallowed intact and must never be broken apart or chewed up. Some medicines work over a few hours instead of all at once. That won't happen if the pills or tablets change form.

Phagophobia, is the fear of swallowing. This can make people extremely reluctant or avoid swallowing food, drinks, or pills. What would people with this condition do? I remember when my little cousin had Phagophobia and always made an entire scene when it came to swallowing drugs. That's why I've decided to invent a device that would make it easier for people with this fear to swallow things, and get rid of their fear.

Hopefully, my device would help those people out there who have phobias for swallowing pills. My main aim is to reduce the level of anxiety which few people have when swallowing pills. I know my invention would be really helpful, and I hope it's going to have a great impact in the society and world at large. Wish me luck!
