

IF I COULD INVENT SOMETHING NEW

I am Dosu Tanimola by name and if I could invent something new, it would be a **TALKING AND LISTENING PEN** that can write on its own. I know that this is going to be the help of Technology and it is based on the way it is programmed by the inventor which is me. This pen of mine is going to have a charging point, charger and memory card. As we all know, all pens use ink, however, charging is the only way to refill my talking and listening pen.

Doing my research, I will assemble team of Engineers, designers and Speech recognition experts like career talk. I will also develop a prototype that combines Artificial Intelligent, speech recognition and audio technology. I will ensure the Pens are users friendly, durable and aesthetically pleasing.

For marketing purpose, I will identify target audiences like schools, professionals, individual with disabilities, etc. I will analyze competitors in assistive technology and smart writing Instruments. I will register trademarks and copyrights for the logo and design by C.A. C (Corporate Affairs Commission), I will also consider crowdfunding platforms like Kickstarter, Indigogo and so on to raise initial funds. I will reach out to venture capital firms, angel inventors or impact inventors focused on assistive technology. I will explore partnerships with educational institution, business or organization serving individuals with disabilities.

I'm going to make sure that potential features of the talking and listening Pen will include speech-to-text functionality, voice commands for note organization and speech, Real-time language translation, audio recording and play back and integration with smart devices and cloud storage.

Furthermore, the listening and talking pen, can play audio related text which can help people who have challenges with language learning. Students can use these pens to learn at their own pace, they are able to replay the audio at their own time. The pens are user-friendly, and it's easy to train people on how it is used. The pen can also be integrated in the classroom to make it very easy for both teacher and student to use. This will make teaching and learning smooth and fun in the classroom.

Finally, the listening and talking pen can also be used beyond the classroom. It can also provide parents with a tool to support their children's education at home. The pen will also have some advanced features that will allow parents to track their child's progress and identify areas where they may need additional support. The pens will be lightweight, portable, flexible and easy to use.

Name: Dosu Tanimola

School: Herbert Macauley Junior High School

Class: JSS 3

The principal: Mrs. Akintola Modupe 08144554611
