

NAME: ABEJOYE DORCAS OBALOLUWA

SCHOOL: FEDERAL SCIENCE AND TECHNICAL COLLEGE, YABA, LAGOS

CLASS: JSS1

IF I COULD INVENT SOMETHING NEW

Invent means to produce, to devise, to concoct, to excogitate, to vamp(up) or to create or design (something that has not exist before) while to invent something new is to excogitate something, such as a useful device or process for the first time through the use of the imagination or of ingenious thinking and experiment. The machine I want to invent is a machine that clears dirt or waste automatically. For example, if one drops any waste or dirt on the floor the machine will clear and tidy that place and make it look tidy and our environment will be free from pollution or diseases or germs. From my experience I have noticed that dirty has caused many havoc to human being as a result of these if I could invent such machine free from dirty. It will be something that will promote cleanliness that will make our surrounding free from dirty.

On the 22nd of March 2024, my mother instructed me to clean and tidy the house when she was going out. Immediately, she left, I made sure the environment was clean and tidy. Surprisingly, when she arrived, she called me in an aggressive way to check the floor while I noticed the floor was dirty but I knew I swept the floor. My mum argued with me, she punished me severely because she did not believe me. Since that day, I have been thinking of inventing something to solve the problem effectively, for our environment to be clean and tidy. I thought of this invention because my mum always wants me to be sweeping often.

This machine will be on the floor, moving round the house to detect where there is dirt and to clean the environment. I will introduce it to other countries to help in the invention of my product to be of good quality and standardized. It will move round the house and tidy the house well. The moment this machine perceive that there is dirt in a place, it will be sensitive to know where that dirty is. It will move round the whole building and start bringing out the dirty and pack it to one side then it will absolve the programmed as a DIRT ABSOLVER MACHINE. It will be programmed as a technology to absolve dirt's.

Solving this problem will eradicate malaria, dengue fever, typhoid, skin diseases, worm infection, and upper respiratory infection. There will be sound mind for people in the society because of the cleanliness of the society. It will also help our government to reduce the budget for health sector.

I will advertise it to the society, communities, Local Governments, State, and the world at large. I will be a notable person. My name will be written with a golden pen for making our environments free from dirty. I will also add value to the impact of World Health Organization.
