

Name: Charles Victory

School: Showers Christian High School, Port Harcourt, Rivers State.

Class: Grade 8

IF I COULD INVENT SOMETHING NEW

The weekend's over and Monday's here. Time to work, time to learn. You rush into the bathroom hurriedly, throw your clothes on, and grab your bag and lunch before dashing into your car. You're off, but not long after you encounter traffic. Frustrating, isn't it? Wouldn't it be nice to fly above the ground? Perhaps there is a shortcut made useless by an unmoving mountain. You would like to cross? All this could be done with my invention, the "All Elements Car (AEC)".

The AEC resembles any other car when it is on land. What differentiates it from others is its features which can be controlled with buttons inside the car, they would be a button for each feature, each with its designated colour: blue for water surfer, gray for mountain climber, white for skyscraper, and brown for desert crawler. The water surfer feature has two sub-features: 'the submarine' and 'the boat'. Pushing the WS button prepares the car to transform into either one of the aforementioned sub-features for the submarine sub-feature. You flip a switch to enable the car to submerge under water. However, the maximum depth is 20 feet. Basically, it would have an oxygen mask under the chairs and a fan similar to that of a submarine to propel it forward. The mountain allows the car to climb. The car's tires will become firm for it to move over rocky surfaces. The skyscraper feature has wings attached to it, and it will have some features of an aeroplane. It allows the car to fly above the ground up to 30 feet high. The desert crawler feature has parts to withstand a sand storm, flame, dust, and water and the tires naturally shape-shift to accommodate the sandy ground and my invention would be powered with solar and water for different types of species.

Firstly, my invention would help to reduce drivers' stress caused by traffic jams. Traffic jams are increasing in big cities as well as small ones, especially on work or business days. When everyone is trying to get early to their places of work and also at closing hours when there is a rush back home. Some people would prefer to use flying cars and get away from the traffic and others too can use roads so they can reach their place of work faster.

Secondly, my invention would be able to avoid any obstructions on the road like mountains, rivers, etc. The all-elements car would help us pass all the things on the road easily and faster without any stress.

Again, my invention would help to continue a lot of discoveries under water. My invention would help scientists to discover more things under water.

In conclusion, my invention would make travelling faster and more efficient. My invention would help reduce drivers' stress. It will not only make travelling faster , but also very fun.
