

If I could invent something it would be a machine that could cure all diseases. In the past there were different ways of curing people but mostly through herbs. It all changed when modernisation came to stay where by well educated doctors who have gone through different stages of training, practices their work by curing different disease and illness. Technology also have a hand in the curing of diseases but it is not all disease that the medical practitioners and scientist could cure. This puts the life of individuals who possess those incurable diseases at risk due to the limitations faced by the medical practitioners and that's why I would like to invent a machine that can cure all diseases. Firstly, my invention would help to decrease the rate of death of individuals. With a machine that can cure all diseases,it would prolong the life span of humans. Those diseases the scientist couldn't find cure for would be cured and other outbreak of diseases yet to come would also have a cure. The machine will save the medical doctors the time or the lives that could be lost in the process of finding a cure. It could prevent different curfew and also make individuals who contact these diseases have the hope that their is a cure.

Secondly, in a practical and realistic aspect, the news of the cholera outbreak have made people also loose their peace because as it has been said by the medical practitioners, there is no cure for it. The people are trying to prevent it while others with it has lost hope but with this machine the medical practitioners could have anticipated it cure. The human knowledge has some limitations but this machine isn't limited to anything.

Lastly, with the help of this machine it would reduce the

enormous work of a medical practitioner. With effective cures, the patients would no longer need to visit the doctors frequently for symptoms, management and ongoing treatment, there would be no need for regular monitoring and testing, making medical practitioners have time to focus on other patients. The machine could reduce hospitalization rates, alleviating the workload of medical when there are fewer patients to manage, medical practitioners will have less administrative work such as billing and documentation. Without the machine the emotional toll of dealing with chronic won't be significant and the medical practitioners stress wouldn't be reduced.

In conclusion, I would like to change the stressful atmosphere of the world. The format of curing diseases where by ones life will be at risk will change and it will enhance the overall well being of individuals. The world deserve a change and I would like the to be a healthy place for mankind.
