SCHOOL: IKRAAM IDEAL MODEL COLLEGE
CLASS: SENIOR SECONDARY SCHOOL 3

IF I COULD INVENT SOMETHING NEW

“Our most valuable resources- creativity, communication, and invention are infact unlimited”So If i could invent something new, i would create a virtual study app. Not just any app, an extraordinary app. I would make sure it matches, based on their subjects, study preferences, and schedules to help them study together, virtually. It would include features like shared virtual study rooms, group chats, and even virtual flash cards for collaborative learning. The app could make studying more engaging, efficient and enjoyable for students of all ages.

Also, before creating the app, lots of research will be conducted on similar invention to see if my idea is unique, and understand the potential competition of the said invention. Act of invention is not a solitary flash of brilliance but a captivating dance between imagination and pragmatism that begins with seed of curiosity, questions that gnaws at the mind. But curiosity alone is not enough to gloss dreams into tangible reality.

Having a solid idea, i will create a user friendly interface design, because a good app design combines functionality with aesthetics, multilingual support, and other features that can assure a seamless learning experience, and to make the app engaging and enjoyable for users.

What’s more, after creating this app, i will send it to various friends and family to test the effectiveness of the app. I don’t think you can invent on behalf of the customers, unless you are willing to think long term, because a lot of invention doesn’t work. If you are going to invent, it means you are going to experiment, you are going to fail, and if you are going to fail, you have to think long term and make necessary adjustments based on the feedbacks gotten regarding the app.

Furthermore, from things that have happened and from things as they exist and from all things that you know and all those you can not know, you make something through your invention that is not a representation but a whole new thing truer than anything new and alive, and you make it alive. If you make it well enough, you give it immortality.

Equally important, if the invention of the app is complex, i will consider seeking a patent to protect my invention, so as to prevent plagiarism. Invention can be challenging but at the same time rewarding, with persistence, perseverance and creativity. Ideas can come to life and potentially make a positive impact to the world
