

IF I COULD INVENT SOMETHING NEW

It is clear that the world is changing, it is undergoing series of development as modern technology takes over. New inventions have to be formed everyday to satisfy the rising need of man and to produce something that would solve other problems of man which are yet to be attended to.

I have had this dream of inventing an AI [Artificial Intelligence], not just any AI but a special specie that the world has never seen. I started thinking about this idea one day when my father, a policeman, came back home and complained that his dog had been bitten by a cobra when it was sleeping. Then I had this idea, 'WHAT IF THERE WAS A DOG THAT THE TEETH OF A COBRA COULD NOT PENETRATE'. A dog made of indestructible metal that could perform the activities of an AI.

That was when BAMBO came into my mind. BAMBO, an AI, a dog that is made of indestructible metal. An invention that enables one to connect to the brain of BAMBO and program it the way of one likes. I could create a loyal companion that couldn't die but could only be shut down through the link the human had with it.

It would have features like; A visible ear pod link which connects directly to the brain, an ability of smell things that are 300km far and 100km buried under the earth crust. It would be powered by solar panels which would enable it not to power off in the middle of the desert where there is no electricity.

It would have other features like that of a home robot which takes care of the home and keeps its owner company, eye lasers and different weapons in its built in system which would protect and help its owner to chase and catch the target. It would also have a detector and many other fantastic features.

This creation will serve so many functions and be very beneficial to the world. For instance, It could be used to safeguard properties other than employing humans who could fall asleep anytime. It will help policemen etc, because of its metal part that cannot be destroyed.

In conclusion, BAMBO will be of great benefit to the world at large so if ever an opportunity comes to create something new, definitely I will create BAMBO.
